Developing an Autodesk 3D Part Program In 2012, Autodesk released the Autodesk 3D Part software. The software was developed by Autodesk as a way to design and build 3D, product-centric CAD models. It also allows you to update and reuse existing models and parts from Autodesk or third-party sources. You can use these parts to build your own models. This method is called Subscription 3D. A unique and significant benefit of the 3D Part system is that it will allow you to import and export parts from many different modeling applications. You can also access any 3D Part content with your Autodesk Inventor 3D modeling software.
