AutoCAD comes in three versions - AutoCAD LT, AutoCAD 2007 and AutoCAD 2010. AutoCAD 2020 is the latest version of AutoCAD. It offers a new, easy-to-use user interface with 2D and 3D tools. As with previous versions, AutoCAD 2020 runs on Windows, macOS and Linux computers with the CorelDraw, DGN or PDF file format. AutoCAD also runs on mobile devices and tablet computers with various operating systems. AutoCAD 2020 runs on an AutoCAD 2019 runtime environment. A user must be logged into an existing Autodesk account in order to use AutoCAD 2020. If a user has an Autodesk account, the software is licensed to the user for use on any number of computers for a period of time. In the 2D context, the most important difference between AutoCAD and AutoCAD LT is that AutoCAD LT was designed to work with very low resolution screens such as those found in low-cost PCs. AutoCAD LT was not designed to work with 3D graphics. This is particularly the case if the graphics being used are those on a low-cost device such as a smartphone or tablet. What is it about AutoCAD that makes it so attractive to architects and other professional users? Autodesk is a leading provider of software for professional and non-professional users alike. The company's business model is centered on subscription licensing. By way of illustration, the software is licensed for use on any number of computers for a period of time. The customer makes a one-time purchase of the software. The software is installed on the computers and the customer makes monthly payments based on the number of computers being used, the length of the license period and the number of users. This model was developed in the 1980s, when computers were expensive and difficult to maintain. Because AutoCAD was originally designed for professionals, the program is excellent at creating, editing, viewing, and communicating 2D and 3D design data. It has specific features that make it more attractive to architects and other professionals. For example, the design process is always visible at all times, so when a change is made, the user sees it immediately. In addition, the program is very responsive. For example, if a tool is triggered from within the program, it takes effect immediately. An example of such a tool is the marquee tool, which is a
