Target Customers at the Top of the Pyramid in Peru At a time when consumers around the world are turning to the internet to make shopping decisions, local companies in Peru have a powerful new weapon: online browsers. The country has become a pioneer in the use of technology to target customers at the top of the pyramid, or people with the lowest levels of income and consumer education. Era's portfolio of internet-based products is proving to be a big success, and Peruvian families are spending more time shopping online than they did five years ago. But the country is also trying to capitalize on the popularity of social networks in the United States and Europe by harnessing their power to reach new audiences, using them to promote local products and services. In the business of Peruvian online marketing, mothers are key. They are the first to visit websites, making them the engine to drive sales, according to technology executive Javier Bolanos of Peruvian Internet. His company launches new products geared to customers in the country's highland regions and in the informal sector, which is making consumer goods, from soap to footwear, increasingly competitive. Peruvian supermarkets are using social media sites such as Facebook to promote price comparisons, says Mauricio Rodriguez, director of strategy for the country's leading supermarket chain, Prodec. And Bolanos says local IT firm Estanquil is developing a custom mobile-phone application that will alert customers to price drops. Mobile phones make it easier to shop online at home or on the move, and to check product comparisons. And social networks enable consumers to interact and get advice more effectively than in

The presentation explains the workings of the memory used by the system to store data and programs. The presentation begins with a diagram to better understand the concept of the memory, from the memory cell, the data and pointers, and how data can be stored, and how a memory is normally used to read, write, delete, and otherwise manipulate the stored data. Other topics that are covered in detail are: RAM number and address RAM data type RAM memory cell structure RAM Data structuring, data types, and the flow of data within the RAM memory Processing data Reading from the RAM and writing to the RAM Programming the RAM "Programming" the data without actually programming it RAM pointer RAM address function RAM pointer programming Incrementing or decrementing the address Deleting data from the RAM Programming pointer RAM delete data process RAM logical memory RAM physical memory RAM file management RAM data address and array RAM read and write data The presentation is best used after the student has understood the concept of the RAM and the data it uses to store and retrieve data from the system.
