The earlier the version, the more features the software has. Newer versions have some features, but not all that are in older versions. Knowing Which Tool to Use for a Job Blending photos together into one image is a great way to create a composite image, but it's not very practical for making a number of images into one. Photoshop excels at this kind of image modification. In this section, you find out how to get started with the Photoshop editing process — from downloading and installing the program to switching to a different tool when needed. For information on creating images in Photoshop, visit the book's www.dummies.com/extras/photoshopetiquette website to find some great tutorials. Photoshop makes creating high-quality raster images quick and simple. Raster images are a mixture of pixels — the tiny pieces of color that make up an image — arranged in a grid. A grid of pixels form a specific color, such as a red object, or group of colors that make up a picture, such as a red car and blue sky. This makes Photoshop's color separation process easy and simple — you work on a layer and paint one color onto the layer — but the drawbacks are that an image with a grid can't show any areas that aren't covered in one color, and color separation requires an additional step in the process. A better technique is to merge two photos together with a process called layer blending — which gives layers a third color — or to merge multiple layers together, making each layer part of a new image. For years, Photoshop has been the king of image editing software because it was easy to use for the novice and it was robust enough for professionals to use. With its simple editing and color separation processes, anyone can use it and achieve great results. Photoshop is extremely flexible when it comes to using layers for raster images. Photoshop has two types of layers: 1. Composites allow you to change a portion of one layer over another. 2. Transparency layers are merged images on top of each other, and color separation allows you to change the color of a layer over another. You can use them in any combination you like, but the following are the most common and useful: A background layer: This is a layer in which you paint the entire image. Because you can get great results with this type of layer, it's a good way to create a template for raster

News: House Transportation Committee Approves Rail Pipeline By Kate Sheppard June 24th, 2011 The U.S. House Transportation and Infrastructure Committee approved on Wednesday, with 12 members voting for and one member voting against, a bill that would allow the construction of a high-speed rail tunnel and build a new rail line beneath the Hudson River. Tunneling, which is already underway at the East River, is expected to cost at least \$14 billion. The new tunnel is estimated to cost \$17 billion to \$20 billion and would use two new tracks. In addition, the tunnels would be nearly 8 miles long and completely separate the existing LIRR and Metro North lines. The new line, which has been proposed as a "land bridge" connecting New York and New Jersey, would then be used by passenger trains connecting the two cities. The bill also includes approval for the second phase of the Gateway Program, which is planning for the rebuilding of the New Haven-Hartford-Springfield and New Haven-Hartford-Springfield-New Haven lines. Committee Chairman John L. Mica (R-FL) said the bill would "provide the missing link" in the Northeast Corridor. New Haven Mayor Joseph Maturo told The New York Post that having the tunnel and the new rail line would open up the path for the state's "next generation of jobs." "Both the 511th and the 256th bridges are iconic and venerable structures — but they need to be replaced. The proposed bridge over the Hudson River would be as tall as the famous Eiffel Tower, and its length would be nearly double the width of the Golden Gate Bridge," Mica said in a statement. "Our region is ready to draw from the legacy of these structures. We need just one more piece of the puzzle: a rail tunnel across the Hudson that will link New Jersey and New York. The first phase of the Gateway Program was a major step forward for American infrastructure, but the next step is a tunnel across the Hudson. I thank members of the Transportation Committee for their continued attention to this vital project." The New York Daily News reported that voters in Westchester and the New York suburbs want the new rail line but oppose the tunnel. A poll conducted for the paper found that 60 percent of voters in three suburban counties—Westchester, Nassau and Suffolk—
